

PRESS RELEASE

FOR IMMEDIATE RELEASE

ACCLAIMED ENVIRONMENT GAME NOW AVAILABLE IN AUSTRALIA

Of the species which have populated the Earth since its birth, how many are left today?

- > *Less than 10%*
- *About 40%*
- *More than 40%*

Apart from natural catastrophes, humans have been primarily responsible for the disappearance of these species over the last 2000 years

DBZ Publishing has secured the Australian distribution rights for a unique new environmentally orientated game - ***Bioviva***. Winner of eight International Awards, ***Bioviva*** is a challenging board game that offers opportunities to share knowledge, and learn.

Bioviva is played on a topographical map that represents our world in its natural regions, without indication of countries or borders. It is a trivia style game that offers amazing, and often humorous, insights into our wondrous planet and motivates players to act in ways that respect and acknowledge life on earth.

With nine hundred questions, ***Bioviva*** covers a variety of scientific fields.

Presented in a format that reinforces its principles, ***Bioviva*** is made from recycled materials and is recyclable.

David Brennan, founder of DBZ Publishing, believes that ***Bioviva*** provides a unique opportunity for children to learn about our environment and how we can modify behaviour for the betterment of our environment.

“Bioviva is completely in the spirit of the moment since it's about the environment and allows the players to explore the story of the world - from the birth of the Universe until the most recent problems, such as the greenhouse effect.”

“Games about the environment are often boring. Bioviva is fortunately the exception - the players move through a planisphere without frontiers and answer questions about the story of our planet, nature and science - all complimented by fun and informative comments.”

“Moreover, this game encourages cooperation between players, rather than competition, and will find a place in schools as well as homes.”
