

PRESS RELEASE

FOR IMMEDIATE RELEASE

New USB SmartBoard® Keyboard now available

The much-awaited release of a USB capable *SmartBoard* is now with us.

The **SmartBoard USB** incorporates the innovative ergonomic features of the original *SmartBoard* – including the patented SmartKey™ layout - with a USB interface.

Initially, the *SmartBoard USB* will be available in an all white – “Snow” – colour scheme, with black keys to be available as an option.

The *SmartKey* layout is designed to alleviate finger, as well as wrist, problems. It's unique arrangement of keys has them aligned to match the natural fanning of the fingers, with the furthestmost keys being slightly larger, to help eliminate mis-keying.

Like the existing models, the *SmartBoard USB* also incorporates gold plated mechanical key switches, providing unparalleled audible and tactile feedback to the typist.

These are the same features that lead the **Guinness Book of World Records** holder for speed typing to describe the *SmartBoard* as “an incredible breakthrough in keyboard design”.

The *SmartBoard USB* also shares the same footprint as the existing *SmartBoard*, which is smaller than alternative ergonomic keyboards, enabling its use in keyboard drawers, as well as occupying less desk space.

The *SmartBoard* is manufactured by DataDesk; a long established US based manufacturer of quality keyboards.

The *SmartBoard* will be appreciated by anyone who uses their computer to make their living. With the keyboard being the main point of interaction with their system, they will be sure to benefit from the innovative design features and experience a radical improvement in their typing performance and reduced fatigue.

--- END ---
