

PRESS RELEASE

FOR IMMEDIATE RELEASE

Innovative Speedskins now available in Australia

Divisible by Zero are pleased to announce their appointment as the exclusive Australian and NZ distributor for an innovative new product – SPEEDSKINS™.

SPEEDSKINS are opaque, flexible and removable keyboard covers that come in two basic forms:

- The original **SPEEDSKIN** which hides the alpha and numeric keys and acts as an aid to learning to touch type (no peeking!) and
- **c-SKIN** – the SPEEDSKIN overprinted with an alternate character set, enabling you to change the character of your PC simply by changing the language settings within the Windows or Apple OS control panel and placing a matching c-SKIN over the keyboard.

Why would you want to do this?

- Take an English **c-SKIN** with you overseas – especially to Europe and Asia – and use it to swap the keyboard layout back to something familiar when using Internet cafes or a colleague's system.
- Use the German or Greek **c-SKIN** to write letters or send e-mail to associates and relatives in their native language, without having to hunt for those funny characters!
- Use the English upper/lower case **c-SKIN** to assist young children who have yet to learn upper case letters to use a keyboard.
- Want to try out a more efficient keyboard layout, like Dvorak? Change the control panel, for the Dvorak **c-SKIN** and give it a try. Don't like it? Take the **c-Skin** off and change back to a qwerty layout.

David Brennan from DBZ is enthused about this product –

“As SPEEDSKINs and c-SKINs cover only the alpha and numeric keys, you don't run into problems with needing different models for different keyboards, you can even cut it along the dotted line to fit it to most split ergonomic keyboards.

Also, for “flatter” keyboards, there is also the i-SKIN, designed to fit the newer Apple and most laptop keyboards.”

c-SKINs – in SPEEDSKIN or i-SKIN format, are available for any language that appears in the standard set of languages for the *Keyboard* entry in either the Windows or Apple operating system's *Control Panel*.

DBZ can even have made up a c-SKIN to match special language needs – such as Hebrew or Russian – however the users of these are likely to be using special software.

Speedskin were also awarded **both Gold and Silver** Jury Awards at the prestigious *2001 INPEX Innovation Exposition* – Gold for SPEEDSKIN and Silver for c-SKIN.

--- END ---
