

Little Fingers

WHERE LITTLE IS JUST RIGHT

All key caps are specially sized and spaced to optimise children's typing ease and feature both lower and upper case characters

Colour-coded key caps for often used keys with Windows, DOS or Macintosh systems

3-Button trackball puts all point and click functions within easy reach and eliminates "missing" mice. A version without trackball also available.

Dual purpose keys provide extended keyboard functionality

Small footprint and ergonomic design includes built-in wrist rest for maximum typing comfort

The world's first keyboard specially designed for children's smaller hands!

We don't expect children to wear shoes too large for their feet or sit at adult sized desks, so why should they use a computer keyboard too large for their hands?

LittleFingers[®] is a keyboard designed specifically for younger children - it even features both lower and upper case letters on the key caps - with its *patented* key size and spacing especially designed for smaller hands.

Children can now reach all of the keys comfortably and confidently, no longer needing to "hunt and peck" on a keyboard designed for adult-sized hands while typing. This also helps them to avoid the posture problems that may affect them in later years.

The **LittleFingers**[®] **Deluxe** is both a full-function keyboard and a rugged trackball that eliminates the need for a separate mouse. This unique design lets children type, point and click without moving their hands from the keyboard.

Where a mouse is preferred, the **LittleFingers**[®] **Standard** replaces the trackball with a standard numeric keypad.

Also, because **LittleFingers**[®] works on both Macs and PCs, it doesn't matter what computer system you have - now or in the future!

Best of all, **LittleFingers**[®] and a normal keyboard & mouse can be used at the same time, so there is no need for cable swapping. This unique feature allows parents or teachers to work side-by-side with the child for teaching, assisting, or joint computer activities. Now, children's computer time can also become a quality learning and/or family experience.

A **USB** version is now also available to suit Apple iMacs, newer Windows PCs and laptops.

Because hands come in different sizes ... so should keyboards!

Size Does Matter!

The **LittleFingers**® keyboard is perfectly sized to fit small hands making typing easy and accurate from the start. With keys spaced just right, children can achieve basic typing skills and confidence early on, rather than straining and developing hunt-and-peck techniques on traditional, oversized keyboards. Give your children **LittleFingers**® so they can learn the correct and comfortable way to type!

Design Features

- ◆ Specially designed patented key size and spacing allows children to learn how to type proficiently from the start.
- ◆ Small footprint (*only 32cm wide, including trackball on the Deluxe*) leaves plenty of room for other work materials on the desktop
- ◆ With the Deluxe, there is no need for mouse pad space
- ◆ Built-in ergonomic wrist rest assures children remain comfortable while typing
- ◆ Specially designed to allow standard adult-sized keyboard to be connected at the same time, allowing parents or teachers to work side-by-side with the child or share the system.

Technical Specifications

All Models

Layout

- ◆ Standard QWERTY
- ◆ Lower and upper case letters on key caps
