Faster and
More Comfortably
Than Ever Before!**

SMARTBOARD

The keyboard that works the way you do.

Datadesk's new SmartBoard has been carefully engineered to encourage typing in the most natural position. It incorporates the patented SmartKey™ layout specially designed to help alleviate both wrist and finger stress problems.

While other ergonomic keyboards are designed to lessen wrist problems, they ignore the associated finger problems which are a major contributor to typing discomfort and repetitive stress injuries. SmartBoard is not only split for the alignment of the wrists with the forearms, but its SmartKey layout aligns the columns of keys so they match the natural "fanning" of your fingers.

What's more, SmartBoard will fit any standard keyboard drawer and save valuable desktop space because it's 20% smaller than other ergonomic keyboards. Additionally, it has the error-free touch that only comes from Datadesk's famous tactile-response key switches. Best of all, the SmartBoard still retains the standard "QWERTY" layout, so no retraining is required. With SmartBoard, beginning typists can learn quicker and intermediate and experts can type faster with fewer mistakes than ever before!

The SmartBoard Advantage!

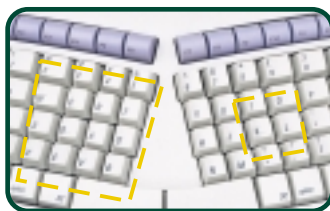

Space-Saving Design

SmartBoard is up to 20% smaller than other "split" keyboards. This means you'll save valuable desktop space and it will fit any keyboard drawer.

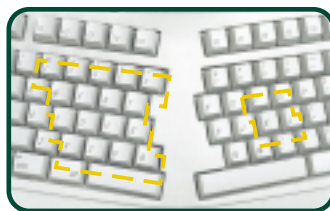

Patented SmartKey™ Layout

The SmartKey™ layout perfectly positions the keys for the natural "fanning" movements of the fingers. Open and close your fingers and the keys are right there.

SmartBoard

Other Keyboards

Larger Keys for Outside Letters

The SmartKey™ layout has larger keys for hard-to-reach letters (like "Q", "W", "O" and "P"). Larger sizing makes these letters easier to find and type.

"As the World's Fastest Typist, I am always looking for keyboard innovations that will allow me to type faster and more comfortably. When I tried the SmartBoard, I knew I had found the answer. Simply put, the SmartKey layout is an incredible breakthrough in keyboard design."

Mr. Arkelian,
Typing World Record Holder
Guinness Book of World Record

"it's a good deal, two carpal-tunnel-free thumbs up".

-MacHome Magazine-

"Datadesk's keyboards have been consistently the best."

-MacUser-

"SmartBoard has a good feel and is easier to adapt to than the Microsoft Natural Keyboard"

-Windows Sources-

"Anyone who spends a lot of time on his or her computer will appreciate this innovative keyboard."

-Internet Computing-

"I'd give it so many "mice" that you'd need the Pied Piper to clear your office."

-MacDigest-
